## Product function and intended use

The Equipment Under Test (EUT) is an air conditioner remote controller embedded with WiFi connectivity. It is powered by AC/DC power adaptor. It supports IEEE 802.11 b/g/n (2.4GHz) wireless communication function.

## FCC ID: 2AHCD-SKY-V01

## **Independent Operation Modes**

The basic operation mode is transmitting mode. For further information refer to User Manual

## Related Submittal(s) Grants

This is a single application for certification of the transmitter.

#### Remark

The test results in this test report are only relevant to the tested sample and does not involve any assessment in the production.

Test Report No.: 14045898 001 Date: 23.12.2016 Page 5 of 22

## **Test Set-up and Operation Mode**

## **Principle of Configuration Selection**

Emission: The equipment under test (EUT) was configured to measure its highest possible radiation

level. The test modes were adapted accordingly in reference to the instructions for use.

#### **Test Operation and Test Software**

Test operation should refer to test methodology.

For Part 15B

Client provides a test software and connection board to simulate the data transfer scenario. A
 Faraday's bag was also provide by client to eliminate the emission from the connection board during
 testing.

#### For part 15C

- Client provides a test mode sample which programmed with the maximum RF output power and worst case data-rate setting. The test mode sample also programmed to change the modulation and transmitting channel by pressing a button on the EUT. The setting of the RF output power expected by the customer shall be fixed on the firmware of the final end product.
- Pre-scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and data rate.

Below modulations and data rate was used during testing.

| 802.11 Protocol | Modulation Type | Data Rate |
|-----------------|-----------------|-----------|
| b               | DSSS (CCK)      | 11 Mbit/s |
| g               | OFDM (QPSK)     | 12 Mbit/s |
| n               | OFDM (QPSK)     | 13 Mbit/s |

### **Special Accessories and Auxiliary Equipment**

The following adaptor provided by client was used as power supply for the EUT.

Model: A062-0501000IDInput: 100-240VAC, 0.3AOutput: 5.0VDC, 1000mA

#### Countermeasures to achieve EMC Compliance

- none

Test Report No.: 14045898 001 Date: 23.12.2016 Page 6 of 22

## **Test Methodology**

#### **Radiated Emission**

The radiated emission measurements of the transmitter part were performed according to the procedures in ANSI C63.10-2013. The radiated emission measurements of the data transfer part were performed according to the procedures in ANSI C63.4-2014.

For measurement below 1GHz, the equipment under test (EUT) was placed at the middle of the 80 cm height turntable. For measurement above 1GHz, the EUT was placed at the middle of the 1.5 m height turntable and RF absorbing material was placed on ground plane between turntable and measuring antenna. During the testing, the EUT was operated standalone and arranged for maximum emissions. The EUT was tested in three orthogonal planes.

The investigation is performed with the EUT rotated 360°, the antenna height scanned between 1m and 4m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations. Repeat the measurement steps until the maximum emissions were obtained.

All radiated tests were performed at an antenna to EUT with 3 meters distance, unless stated otherwise in particular parts of this test report.

## **Field Strength Calculation**

The field strength at 3 m was established by adding the meter reading of the spectrum analyzer to the factors associated with antenna correction factor, cable loss, preamplifiers and filter attenuation.

The equation is expressed as follow:

$$FS = R + AF + CF + FA - PA$$

Where FS = Field Strength in dBuV/m at 3 meters.

R = Reading of Spectrum Analyzer in dBuV.

AF = Antenna Factor in dB.

CF = Cable Attenuation Factor in dB.

FA = Filter Attenuation Factor in dB.

PA = Preamplifier Factor in dB.

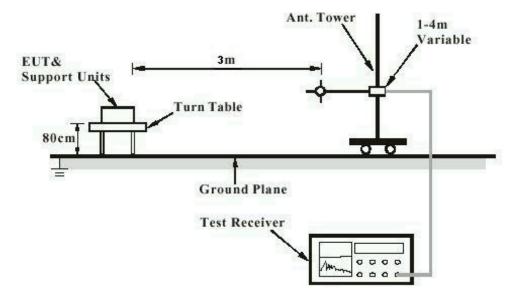

FA and PA are only be used for the measuring frequency above 1 GHz.

Test Report No.: 14045898 001 Date: 23.12.2016 Page 7 of 22

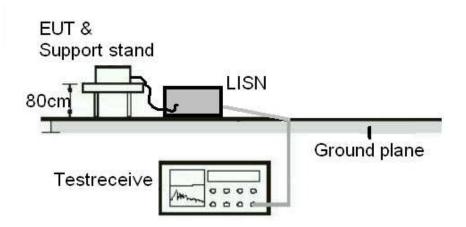

# **Test Setup Diagram**

**Diagram of Measurement Configuration for Radiation Test** 

Note: Measurements above 1 GHz are done with a table height of 1.5m. In addition, there is RF absorbing material on the floor of the test site for above 1GHz measurement.

# **Measurement Uncertainty**

The estimated combined standard uncertainty for power-line conducted emissions measurements is  $\pm 3.43$ dB.

The estimated combined standard uncertainty for radiated emissions measurements is  $\pm 5.10$ dB (30MHz to 200MHz) and  $\pm 5.08$ dB (200MHz to 1000MHz) and is  $\pm 5.10$ dB (30MHz to 200MHz) and  $\pm 5.08$ dB (above 1GHz).

The estimated combined standard uncertainty for antenna conducted emission is ±1.56dB

The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor of k=2, which for the level of confidence is approximately 95%.

Test Report No.: 14045898 001 Date: 23.12.2016 Page 11 of 22

# Results FCC Part 15 - Subpart B

## FCC 15.107 - Conducted Emission on AC Mains

**Pass** 

Test Specification: ANSI C63.4 - 2014

Mode of operation: Wi-Fi connected + data transfer mode Port of testing: AC Mains input port of power supply

Detector : Quasi-peak and Average

RBW : 9 kHz

Supply voltage : 120Vac 60Hz
Temperature : 23°C

Temperature : 23°C Humidity : 50%

## Results FCC Part 15 - Subpart C

FCC 15.203 - Antenna Requirement 1

**Pass** 

FCC Requirement: No antenna other than that furnished by the responsible party shall be used with the

device

Results: a) Antenna type: Integral PCB antenna

b) Manufacturer and model no: N/A
c) Peak Gain: N/A
3 dBi

Verdict: Pass

FCC 15.204 – Antenna Requirement 2

N/A

FCC Requirement: An intentional radiator may be operated only with the antenna with which it is

authorized. If an antenna is marketed with the intentional radiator, it shall be of a type

which is authorized with the intentional radiator.

**Results:** Only one integral antenna can be used.

Verdict: N/A

FCC 15.207 - Conducted Emission on AC Mains

**Pass**

Test Report No.: 14045898 001 Date: 23.12.2016 Page 14 of 22

**Results:** Pre-scan has been conducted to determine the worst-case mode from all possible

combinations between available modulations and data rate.

The radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150kHz to 30MHz does not exceed the limits.

For test Results plots refer to Appendix 1

### FCC 15.247 (a)(2) - 6dB Bandwidth Measurement

**Pass** 

FCC Requirement: Systems using digital modulation techniques may operate in the 902 – 928 MHz,

2400 - 2483.5 MHz, and 5725 - 5850 MHz bands. The minimum 6dB bandwidth shall

be at least 500kHz.

Test Specification: KDB 558074 D01 v03r05 (Clause 8.1)

Port of testing : Temporary antenna port

Mode of operation: TX mode Detector: Peak

RBW/VBW : 100KHz/ 300KHz

Supply voltage : 120VAC Temperature : 23°C Humidity : 50%

**Results:** For test protocols please refer to Appendix 1

## FCC 15.247(e) - Power Spectral Density

**Pass** 

FCC Requirement: For digitally modulated systems, the power spectral density conducted from the

intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band

during any time interval of continuous transmission.

Test Specification: KDB 558074 D01 v03r05 (Clause 10.7)

Port of testing : Temporary antenna port

Mode of operation: TX mode Detector: RMS

RBW/VBW : 100 KHz / ≥3xRBW

Span : ≥1.5 x OBW Supply voltage : 120VAC Temperature : 23°C Humidity : 50%

**Results:** For test protocols please refer to Appendix 1.

#### FCC 15.247(d) - Spurious Conducted Emissions

**Pass** 

Test Specification: KDB 558074 D01 v03r05 (Clause 11.0)

Mode of operation: TX mode

Port of testing : Temporary antenna port

Detector : Peak

RBW/VBW : 100 kHz / 300 kHz

Supply voltage : 120VAC Temperature : 23 °C Humidity : 50 %

FCC Requirement: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or

digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based

on either an RF conducted or a radiated measurement.

**Results:** Pre-scan has been conducted to determine the worst-case mode from all possible

combinations between available modulations and data rate.

Only the worst cases is shown below. For test protocols refer to Appendix 1

|-----------------------|--------------------------|-------------------|------|
| FCC 15.205 – Radiated | l Emissions in Restricte | d Freduency Bands | Pass |

Test Specification: ANSI C63.10 - 2013

Mode of operation: TX mode
Port of testing: Enclosure
Detector: Peak

RBW/VBW : 100 k

: 100 kHz / 300 kHz for f < 1 GHz 1 MHz / 3 MHz for f > 1 GHz

Supply voltage : 120VAC Temperature : 23°C Humidity : 50%

FCC Requirement: In any 100kHz bandwidth outside the frequency band at least 20dB below the highest

level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in section15.205(a), must also comply with the radiated emission

limits specified in section 15.205(c).

**Results:** Pre-scan has been conducted to determine the worst-case mode from all possible

combinations between available modulations and data rate.

All three transmit frequency modes comply with the field strength within the restricted

bands. There is no spurious found below 30MHz.
